Citroën Type HY

Produced after the Second World War to meet the urgent needs of a commercial vehicle in the European post-war market. The Type H was an exceptional design due to its low cost and practicality qualities

The type H had a unitary body with no separate frame, four-wheel independent suspension, and front-wheel drive.

Traction avant 4 cylinder engine and the unsophisticated 3 speed gearbox

The engine and drivetrain well behind the front wheels axles, with very little overhangs, combined with sophisticated totally independent suspensions.

Nearly half a million "H" were built in over thirty-three years until 1981.
